

Think your email archiving problems are solved with Office 365? Think again...

Putting your email in the cloud has its advantages like not having to pay for email servers. Office 365 offers relatively inexpensive and easy-to-deploy cloud-based email archiving, however it has some significant gaps:

1 Limited Archiving Support

Office 365 does not archive information from any other email platforms. With MAX Mail you get fully platform-agnostic archiving.

2 No Lock-in Of Your Data

With Office 365 your email data is stuck in the Microsoft Cloud. MAX Mail provides redundant storage, independent of Microsoft's platform.

3 Index Latency

Office 365 requires up to an hour from upload to availability in search results. With MAX Mail, indexing for inbound, outbound, and internal mail is near real-time.

4 Limited Retention and Disposition Capability

Office 365 retention/disposition capabilities only include options to retain or delete messages based on the mailbox. MAX Mail provides much more granular policies, to allow different retention intervals depending on the message.

5 Lack of Protection

By default, Office 365 does not protect items in the archive, so content can't be classified as original. In MAX Mail's archive, all messages are read-only and tamper proof.

6 Continued Costs for Inactive Users

If you wish to preserve messages in Office 365 for inactive users, you must continue to pay for those users. MAX Mail does not charge for inactive users (subject to a fair use policy).

MAX Mail was designed from the ground up specifically for IT solution providers

Benefits at a Glance

- Maximize compliance with data protection laws
- Minimize legal risk and be prepared for e-discovery
- Access and search the archive directly from outlook with the MAX Mail plugin for Outlook
- Support governance and compliance objectives with easy message retrieval
- Nothing to install or maintain, with limitless storage capacity
- Deploy alongside MAX Mail Protection, for comprehensive business email protection and continuity
